PROFESSIONAL SUMMARY

Computer Science senior at ASU seeking a Summer 2027 Software Engineering or Web Development role. I have hands-on experience building responsive, full-stack web and mobile applications with TypeScript, React, Next.js, Tailwind CSS, and Python. Skilled in artificial intelligence and AI/ML integrations using the Anthropic Claude and Google Gemini APIs.

EDUCATION

Bachelor of Science in Computer Science

Grad. May 2027

Arizona State University, Tempe, Az

- **Relevant Coursework:** Operating Systems (CSE 330), Programming Languages (CSE 340), Theory of Computation (CSE 355), Information Assurance & Cybersecurity (CSE 365), Data Structures, Object-Oriented Programming.
- **Honors:** Top 3 in Women in Computer Science Programming Competition, Women in Computer Science Mentorship (Spring 2026)
- **Extracurriculars:** Women in Computer Science (WICS), Software Developers Association (SODA), SafeTrack.
- Connected with Alexa Wennet of Wells Fargo at the ASU Career Fair and attended a Wells Fargo technology information session.

PROFESSIONAL EXPERIENCE

Software Engineer Intern

March 2026 to Present

JUSTPLATYPOST LLC

Remote

- Engineered the AI foundation of Tukd, a platform that turns a one-sentence idea into a live mobile app, landing page, and backend, building the TypeScript streaming Claude SDK wrapper with prompt caching and tool-use orchestration that powers all code generation and delivers full apps in under 60 seconds.
- Built Server-Sent Events (SSE) streaming routes that push real-time text, tool events, and file updates to the editor, achieving sub-200 ms first-token latency so non-developers watch every screen of their app build live instead of waiting on a loading screen.
- Redesigned the product in Figma and shipped a design system of 20+ reusable React and Tailwind components across the Next.js landing page and React Native / Expo mobile preview, supporting showcase apps with 4,000+ combined downloads.

PROJECTS

Pulse-Play: BPM-Driven Music Discovery Web App

Next.js, TypeScript, Tailwind, Supabase, Arduino, Web Serial API

Feb 2026 – Apr 2026

- Mentored a group of underclassmen to build a full-stack web app that recommends music in real time based on a user's heart-rate BPM, solving the mismatch between how streaming apps guess mood from past clicks and how a listener actually feels in the moment.
- Streamed Arduino heart-rate data via the Web Serial API into 5 BPM-zoned playlists (iTunes Search API) with a Supabase dashboard and responsive Tailwind UI, shipping a live app that keeps users in their workout zone and eases cooldown.

Polarix - MedPolicy: Healthcare Policy Search Platform (Hackathon)

Next.js, Fast API, Claude API, pgvector

April 2026

- Collaborated with a team of 4 to build a tool that compares insurance plans side by side to find the lowest out-of-pocket price for a patient's prescriptions, driven by how confusing and costly it is for families to figure out which coverage actually saves them money.
- Shipped a Next.js frontend on Vercel and a FastAPI backend using the Claude API and pgvector to search and compare dense policy documents within 48 hours, sponsored by Anton RX, helping patients cut medication costs without reading fine print.

SafeTrack: GPS Personal Safety Desktop App

Python, PyQt6, SQLite, Mesh Networking

Aug 2025 - Present

- Led a four-person engineering team through ASU's EPICS program to build a GPS safety app that tracks children in Kenya on their walk between home and school, defining architecture, applying design patterns (MVC, observer), and reviewing pull requests, motivated by keeping kids safe in areas with little internet access.
- Implemented authentication, a notification center, an interactive map view, and settings in PyQt6 with SQLite-persisted state and offline-first design, letting parents and schools follow students' routes and receive alerts over mesh networking even without reliable internet.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, HTML/CSS, C++, C#

Frontend: React, Next.js, React Native, Expo, Tailwind CSS, Figma

AI & Backend: Claude API (streaming, prompt caching, tool use), Gemini API, RAG, pgvector, FastAPI, Flask, Node.js, REST, SSE, PyQt6

Cloud & Tools: Vercel, Supabase, Firebase, Stripe, Render, Git, GitHub Actions, CI/CD, Agile/Scrum, Linux
